

Project Initialization & Planning Phase

Define Problem Statements Framework

Organization: SmartBridge / Skill Wallet	Date: 30-09-2026
Team ID: SWTID-2026-5650	Track: AI/ML & GenAI
Project Name: ComicCraft - AI Comic Story Creator using Gemini Models	Phase: 1. Brainstorming & Ideation

Customer Problem Statement Framework: A structured methodology designed to help project teams deeply understand the target audience's core challenges, emotional drivers, and functional friction before initiating technical development.

5-Stage Problem Formulating Methodology

1. Persona Identify Target User	2. Objectives Map Core Goals	3. Friction Highlight Obstacles	4. Drivers Analyze Emotional Motives	5. Solution Formulate AI Impact

Defined Problem Statements (PS-1 & PS-2)

ID	Target Audience & Context	Core Problem & Friction	Proposed Gemini AI Solution
PS-1	Aspiring Comic Creators & Indie Storytellers Writers with compelling story scripts who lack formal drawing skills.	Creating traditional comics requires hundreds of hours per issue and advanced artistic expertise, blocking scriptwriters from visualizing their work.	Gemini Multimodal Script Parser: Automatically ingests raw narrative scripts and splits them into structured panel descriptions with optimized art prompts.
PS-2	Visual Webtoon & Comic Artists Creators using generative AI tools for story illustration.	Standard generative AI models suffer from severe character visual drift, changing faces, hair, and clothing across consecutive panels.	Character Consistency Engine: Leverages multimodal style-locking and reference anchors in Gemini to maintain uniform character design throughout story arcs.
