Understanding User Perspective & Friction

Organization: SmartBridge / Skill Wallet	Date: 30-09-2026
Team ID: SWTID-2026-5650	Track: AI/ML & GenAI
Project Name: ComicCraft - AI Comic Story Creator using Gemini Models	Phase: 1. Brainstorming & Ideation

Target Persona: Alex — Indie Writer & Aspiring Webtoon Creator

Goal: Wants to turn written narrative scripts into visually captivating, publication-ready comic strips without spending years learning digital illustration.

SAYS (Explicit Statements)	THINKS (Internal Thoughts & Beliefs)
• "I have a full comic script written, but I don't have the artistic drawing skills to draw it." • "AI generators create nice single images, but the character looks like a totally different person in panel 2." • "Hiring a freelance illustrator costs thousands of dollars per comic issue."	• "Can Gemini help me parse my script into pacing and comic panel prompts automatically?" • "Will AI ever be able to keep my protagonist's hair, face, and clothing uniform across 20 panels?" • "How can I maintain my unique storytelling voice while delegating visual art to AI?"
DOES (Observable Actions & Habits)	FEELS (Emotions, Pains & Gains)
• Writes detailed script drafts and panel breakdown outlines in text editors. • Manually tests image prompts on generative AI platforms to find matching character renders. • Uses basic photo editing tools to manually stitch generated images and speech bubbles together.	Pains (Frictions): • Overwhelmed by complex visual layout mechanics. • Frustrated by character inconsistency across generated panels. Gains (Motivations): • Rapid visual prototyping of story concepts. • Thrilled to see written stories instantly brought to life as full comic pages.
